KEY PROJECTS

Glowlytics — AI-Powered Skincare Ingredient Analyzer

2026

College Major Project · Live at: skincare-analyzer.onrender.com

- Developed a full-stack web application using Flask (Python) + Google Gemini API — analyzes skincare ingredients using AI and provides real-time safety insights to users.
- Implemented complete SEO setup: Google Search Console, XML sitemap, robots.txt, GA4 custom events, Schema markup, OG tags, and UTM tracking.
- Created blog content, set up HARO for link building, and built a Looker Studio analytics dashboard for real-time performance tracking.
- Deployed on Render.com with GitHub version control; integrated JavaScript progress tracker improving user experience and session engagement.

Student Management System — Web Application

2026

College Project · Durg, Chhattisgarh

- Designed and developed a responsive web-based student management system using HTML5, CSS3, and JavaScript — handling student records, data management, and user interactions.
- Implemented clean UI/UX with accessible design principles ensuring smooth navigation and functionality across devices.

Portfolio & work samples (ad screenshots, client reviews, Canva designs, website links) available on request.
